# INDIANA VITAL STATISTICS SUMMARY
## 1981

*Indiana births dropped markedly in 1981, with a total of 84,651 and a rate of 15.5 per 1000 population. Deaths (47,285) showed little change; and as a result, the all-time low rate of 8.6 per 1000 was maintained. United States rates were 15.7 and 8.6, respectively.*

*The fertility rate (births per 1000 females 15 through 44) was 66.1, down from the previous year, and slightly below the national figure. The total fertility rate (lifetime births per 1000 females at current age specific fertility rates) dropped sharply to 1773 and was the second lowest on record.*

*There were 15,016 abortions reported, marking the first decline since record keeping began in 1973. The abortion rate was 177.4 per 1000 live births, well below the national average.*

*There were eight Indiana maternal deaths for a rate of 9.5 per 100,000, both figures up but still low in terms of past statistics. For the first time in history, the State had fewer than 1000 infant deaths (988), in the process setting a new low infant death rate (11.7 per 1000 live births), which matched the national figure.*

*Marriages (55,566) were down for the second year in a row. The rate of 10.2 per 1000 population was well below the national figure of 10.6.*

*The State's July 1, 1981, population was estimated at 5,468,000, marking a decline from 1980.*

*Indiana's 10 leading causes of death were:*

| Cause | Deaths 1981 | Deaths 1980 |
|---|---|---|
| Diseases of the Heart | 18,039 | 18,038 |
| Cancer | 10,107 | 10,005 |
| Cerebrovascular Disease | 4,433 | 4,577 |
| Diseases of the Arteries | 1,543 | 1,555 |
| Motor Vehicle Accidents | 1,246 | 1,220 |
| Accidents (exc. Motor Vehicle) | 1,063 | 1,094 |
| Chronic Obstructive Pulmonary Disease* | 1,057 | 895 |
| Diabetes Mellitus | 1,031 | 1,040 |
| Penumonia | 1,025 | 1,076 |
| Suicide | 606 | 583 |

*Excludes asthma, bronchitis, emphysema. This cause was not included in listings in previous years.

*Except for chronic obstructive pulmonary disease, there was no change in the leading causes from 1980, although Diabetes Mellitus and Pneumonia shifted places. It will be noted that five of the causes showed an increase, while the other five were down.*

## Table 1. RESIDENCE VITAL STATISTICS SUMMARY

Notes:

*Rates:

Births, Marriages and Total Deaths - per 1,000 population
Deaths from Specific Causes - per 100,000 population
Stillbirths and Infant Deaths - per 1,000 live births
Abortions - per 1,000 live births
Maternal (Part A) - per 100,000 live births
Fertility Rate: Births - per 1,000 females 15-44

Total Fertility Rate: The number of births 1,000 females would have in a lifetime if the fertility experience of 1981 prevailed. Calculated by taking the fertility rate for each five-year age group 15 through 44 (15-19, 20-24, etc.), adding, then multiplying by 5 (since each female would have five years experience in each age group). A total fertility rate of approximately 2100 is necessary to maintain the population on a permanent basis.

**Includes deaths listed in younger age groups

Estimated Population, Indiana, July 1, 1981 5,468,000

NOTES:

*1969-71 rates calculated on the basis of a population of the same age, race, and sex proportions as the 1980 population. 1979-81 rates based on 1980 Census population. All rates per 100,000 population.

**All causes accounting for 10 or more deaths per 100,000 population in Indiana, 1979-81 average.

Certain diseases of early infancy rates calculated on the basis of population under one year of age. These deaths and rates were as follows (1969-71 rates adjusted to 1980 population base):

# INDIANA VITAL STATISTICS SUMMARY
# 1982

*For the second year in a row, Indiana births were down in 1982, with a total of 83,890 and a rate of 15.3 per 1000 population. A new record low death rate (8.5 per 1000) was set, as there were 46,584 deaths to state residents recorded.*

*The fertility rate (births per 1000 females 15 through 44) was 64.7, down from 1981 and well below the national estimate of 67.8. The total fertility rate (lifetime births per 1000 females at current age-specific fertility rates) declined to 1740, the lowest on record. A total fertility rate of approximately 2100 is necessary to maintain a stable population over an extended period of time if there is no net migration.*

*There were 15,806 abortions reported, up from 1981 but below the all-time high two years ago. The abortion rate was 188.4 per 1000 live births.*

*Only two maternal deaths were reported for a rate of 2.3 per 100,000 live births. Both figures marked new lows for the state. Following a 20-year trend, infant deaths were down to 951 (11.3 per 1000 live births), setting a new low Indiana total and rate. The U.S. estimated rate was 11.2.*

*Marriages rose slightly to 55,924, but the rate of 10.2 per 1000 population was considerably below the national figure of 10.8.*

*The State's July 1, 1982, population was estimated at 5,471,000, showing virtually no change from the previous year.*

*Indiana's 10 leading causes of death were:*

| Cause | Deaths 1982 | Deaths 1981 |
|---|---|---|
| Diseases of the Heart | 18,108 | 18,039 |
| Cancer | 10,124 | 10,107 |
| Cerebrovascular Disease (Stroke) | 4,184 | 4,433 |
| Diseases of the Arteries | 1,428 | 1,543 |
| Chronic Obstructive Pulmonary Disease | 1,052 | 1,057 |
| Accidents (exc. Motor Vehicle) | 1,040 | 1,063 |
| Motor Vehicle Accidents | 1,020 | 1,246 |
| Pneumonia | 1,016 | 1,025 |
| Diabetes Mellitus | 940 | 1,031 |
| Suicide | 626 | 606 |

*While the 10 leading causes were the same as in 1981, chronic obstructive pulmonary disease and motor vehicle accidents shifted positions, as did pneumonia and diabetes. Only three of the 10 causes (heart disease, cancer, and suicide) showed increases, and none of these was substantial.*

## Table 1. RESIDENCE VITAL STATISTICS SUMMARY

Notes:

*Rates:

Births, Marriages and Total Deaths - per 1,000 population
Deaths from Specific Causes - per 100,000 population
Stillbirths and Infant Deaths - per 1,000 live births
Abortions - per 1,000 live births
Maternal (Part A) - per 100,000 live births
Fertility Rates: Births - per 1,000 females 15-44

Total Fertility Rate: The number of births 1,000 females would have in a lifetime if the fertility experience of 1982 prevailed. Calculated by taking the fertility rate for each five-year age group 15 through 44 (15-19, 20-24, etc.), adding, then multiplying by 5 (since each female would have five years experience in each age group). A total fertility rate of approximately 2100 is necessary to maintain the population on a permanent basis.

**Includes deaths listed in younger age groups

*Rates per 100,000 1980 Census population. Rates for each county based on a population of the same age, race, sex proportions as the 1980 Indiana Census population. For counties with small (usually less than 1,000) nonwhite population, no nonwhite rates are given. Total rates for these counties are based on the assumption that nonwhite rates for the counties would have been identical to those for the state.

*Rates per 100,000 1980 Census population. Rates for each county based on a population of the same race and sex proportions for each age as the 1980 Indiana Census population. For counties with small (usually less than 1,000) nonwhite population, rates are based on the assumption that nonwhite rates for the county would have been identical to those for the state.
